Adding Links to Comments

In Talk comments, you can add links to various sources.

Inserting Links to Confluence Pages

To insert a link to a Confluence page, do the following:

1. In the comment text box press **[**.
2. Start writing the Confluence page title.
3. Choose the page suggested by autocomplete.
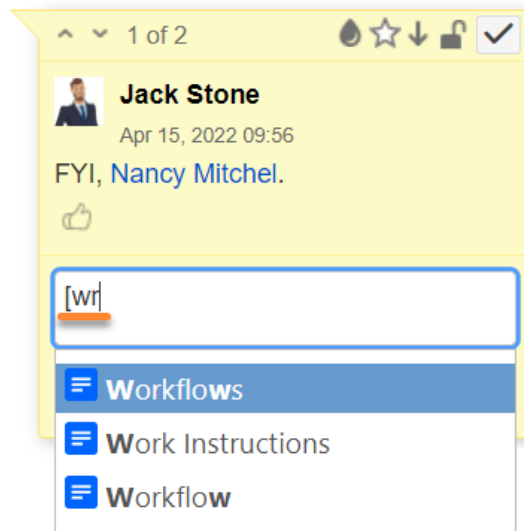

## Inserting Links to External Pages

To insert a link to an external page, do <u>one</u> of the following:

- Paste a URL to a comment. In this case, you will see the complete URL in the comment.
- First, select existing text in a comment and then paste a URL to it. The selected text is automatically converted to a link title.

Inserting Links to Page Attachments

> Please, note that inserting links to attachments is available from version 2.2.0 only.

You can add links to all types of file attachments supported by Confluence **by dropping them in a comment**. The file is automatically attached to the current page and its link appears in the comment as shown below:
To learn more about the format of links in Talk comments, see here.
