Setting restrictions for columns/rows

Use case:

You need to hide some columns/rows with classified data for public view or editing securely.

Solution:

1. Divide your data into two pages:
    a. Insert data which are available for public use on the first page.
    b. Include only classified data on the second one.
2. Apply appropriate restrictions (page view, editing) for the second page.
3. Wrap the restricted table data with the Table Excerpt macro and save the page.
4. Insert the Table Excerpt Include on the page with public data.
5. Lookup/merge data of both tables with the help of Table Transformer.
6. Update the page.

ⓘ Read our blog post to learn how you can restrict access to sensitive information in Confluence tables.
