

TeamCity Integration for JIRA 1.7.3

New in this release

The add-on has received support for JIRA Data Center.

Now you can integrate your JIRA Data Center with multiple TeamCity servers for greater flexibility and outstanding performance.

The new version of add-on also includes the following feature:

- Added the [Response Size](#) option for limiting maximal response size from TeamCity.

Fixed in this release

- Resolved the issue with personal builds causing errors during indexation of TeamCity data.
- Corrected the way of loading builds on the dedicated tabs when scrolling down the list of builds.
