# Migration - Server (Data Center) → Cloud

**The Table Filter, Charts & Spreadsheets for Confluence app can be migrated from Server (Data Center) to Cloud and vice versa successfully:**

- With the help of Confluence Cloud Migration Assistant
- By space exporting and importing

All the data such as table content and macro settings is a part of a Confluence page. There is no need to prepare the pages containing the macros included in the app before the migration.

> ⓘ  You can find a detailed comparison of Cloud and Server versions on this page .
