

Awesome Graphs 5.4.5

New in this release

We've added the **Timeout** status for repositories that we failed to index for 16 hours. This time limit is currently set to avoid the endless processing of a single repository.

Before that, we marked those repositories with the **Invalid** status which led to new attempts to re-index them after re-enabling the app. Now, these repositories will not be processed after re-enabling the app to reduce the performance impact and increase the indexing speed.

Same as before, you may find the status of indexing on your instance in *Bitbucket Administration > Troubleshooting and support tools > System Information > Awesome Graphs* or in the *awesome-graphs.log* file located in *<Bitbucket home directory>/log*.
