TeamCity Integration for Bitbucket

The **TeamCity Integration for Bitbucket** app allows for a seamless
connection of your Bitbucket to TeamCity CI/CD server, so you can
monitor and configure the pipeline without losing the context.

The solution reduces the time spent switching tools and helps to release
faster with higher quality and stability as you can focus on the things that
are really important.

Using it, you get the capability to:

- act on builds right from Bitbucket in one click
- view build results right next to your code
- access logs and artifacts via direct links

Getting started

Bitbucket authorization with access tokens

Where to view builds information, logs, artifacts and perform actions

Adding Commit Status Publisher to your build configuration
