

Difference between Server/Data Center and Cloud versions

This page shows the differences between the Server / Data Center and Cloud versions of the Smart Attachments app.

Functionality	Available in Server/Data Center	Available in Cloud	Specifics of implementation
Attachments categories	✓	✓	<ol style="list-style-type: none">1. Attachment categories in Jira Cloud are replaced with labels.2. You can assign up to 5 labels per attachment.3. The current attribution to a specific category is migrated as a label, you can further group attachments by label, which will look the same as categories.
Document revisions	✓	✓	The Cloud app does not support full-fledged revision management. It groups attachments with the same name by upload date and shows them as an expandable document with revisions.
Bulk operations	✓	✓	The Cloud app does not support all the bulk operations from the Server app.
Categorization of attachments in different views	✓	✗	Label management is available in the issue view only. Transition forms are not supported.
Search for attachments	✓	✓	Search by labels is not available in the Cloud app.
Preview of attachments	✓	✗	Preview of attachments is not available in the Cloud app.
Commenting on attachments	✓	✗	
Global access restrictions	✓	✗	
Status-specific restrictions	✓	✗	
Automatic file distribution	✓	✗	
Attachment category management	✓	✓	In the Cloud app, management of labels is available.
