

Migration from Server/DC to Cloud

Please go through our step-by-step instructions to migrate the Smart Attachments app's data to Jira Cloud. Please address your questions or issues to [our support](#).

Checking pre-requisites

The Smart Attachments for Jira app migrates only the data for the projects available in Jira Cloud. You need to migrate the app simultaneously with Jira projects.

Before proceeding to migration of the Smart Attachments app from Jira Server/Data Center to Jira Cloud, please check [Pre-Migration Assessment Checklist](#).

- 1. Update the Smart Attachments for Jira Cloud app to the latest version.
- 2. Update the Jira Cloud Migration Assistant to the latest version.
- 3. Update the Smart Attachments for Jira Server/Data Center to version 2.12.0 or newer.

Assessing the app for Cloud migration

Please consider that the migration process can take up to 48 hours.

- 1. Navigate to Jira administration console.
- 2. On the navigation sidebar, select Migrate to cloud.

Migration assistant home

This tool will help you assess and create your migration plan. You'll then be able to test and migrate to a cloud-hosted site.

PLAN

PLAN YOUR MIGRATION
Read Atlassian's planning guides to learn how best to plan for your migration.

PREPARE

ASSESS AND INSTALL APPS
Assess your on-premise apps, create or connect to a cloud site, and install the apps you need on cloud.

MIGRATE

MANAGE YOUR MIGRATION
Migrate users, groups and projects to Jira cloud in stages, or all at once.

ABOUT YOUR PRODUCT

GROUPS	2
USERS	1
PROJECTS	7 (26 issues, 2 GB)
APPS	3

Assess your apps

Before you start assessing and installing your apps, make sure you read through our guidance on [planning your migration](#).

User installed apps (3) *	Status :	Exists in cloud :	Can be migrated :	Notes
Advanced Roadmaps fo...	Not needed in cloud	✓	?	Enter your notes here
Smart Attachments	Needed in cloud	✓	✓	Enter your notes here
TeamCity Integration Pl...	Not needed in cloud	✓	?	Enter your notes here

100% COMPLETE 3 of 3 apps assessed Last saved just now Download CSV file Continue

- On the **Assess your apps** page, select *Needed in cloud* for the Smart Attachments app. Choose the status for the rest of the apps if you plan to migrate multiple apps.
- Click **Continue**.
- Click **Choose cloud site**.
- Enter the site to migrate from and select the cloud site which data will be migrated to.

Need help

Choose your destination cloud site

You must be signed in as the **Site Administrator** for the Atlassian cloud site you're migrating to.

Atlassian Cloud with admin access for your cloud site

Vadim Rutkevich [Stiltsoft] vrutkevich@stiltsoft.com

Change account

Migrate from *

http://docker.stiltsoft.com:18490

Enter the base URL of your server instance. To locate the **Base URL**, go to **System > General configuration**.

Migrate to *

https://sa-migration.atlassian.net

You have selected a site with a free plan. You'll have some restrictions on users, attachments and permissions. [Learn more](#)

☒ Allow Atlassian to access migrations data*

To migrate your data, Atlassian needs permission to copy it from your server instance and transfer it to your linked cloud site.

By choosing **Allow** you also agree to Atlassian's [Privacy Policy](#) and [Customer Agreement](#).

Cancel Confirm

- Check the Allow Atlassian to access migrations data box.
- When complete, click **Confirm**.
- Return to the Migration Assistant section.

11. Click **Manage Your Migration.**

How it works

Visit the Cloud Migration Center to understand more about compliance and compatibility, and read the migration planning guide to prepare for the move.

Connect to cloud

Connect to a new or existing Atlassian cloud site.

Choose what to migrate

You can migrate everything at once or break it up into different stages.

Check for errors

We'll check for any errors or conflicts so you can resolve them before you migrate.

Review

Review what you're planning to migrate.

Migrate now or later

Run your migration straight away or save it to run later.

When you migrate, the Migration Assistant will attempt to link data and objects that have already been migrated to your cloud site. Learn more about how we link your data.

Back

Connect to cloud

13. Click **Connect to cloud.**

Please note that the app prevents starting a new migration for the same host if another migration for it is in progress.

FAQ

Do we need to perform re-indexation after migration?

You don't need to perform the re-index on Cloud. It starts automatically upon the end of migration

Is there a way to define labels at the project level?

Labels are global. Please, follow the information in our documentation to learn how to [start with an app](#) and how to [administer labels](#) on Cloud.

After migration, I have some issues with attachments where the Smart Attachments section displays *"No attachments in the issue found"*

This behavior can be caused by the fact that this particular Jira issue has access restrictions configured the attachment section. If Jira Field Configuration for some issue types in the migrated project has the attachment field set to **hidden**, then attachments still display on the issue view screen. However, hidden fields are not returned through the Jira API's. As soon as you change the field configuration to **show** the attachment field, the API call will return the expected result (with attachment data) and the Smart Attachments section within the impacted issues will correctly display the list of attachments.

After migration, some of my labels are missing

Please, check for the scheme configuration in your Jira Server/Data Center in the projects where you have this issue. Our app doesn't migrate labels from the default Uncategorized category even if it has been renamed in your project. You can find more details in the [migration documentation](#).

Migration is running for more than 24 hours. Is it OK?

The migration process can take up to 48 hours. So, this is within the expected range.

The migration procedure of our app data and any other app data is a multi-step process requiring lots of inter-communication of a Server app, Cloud storage, app migration platform, and Jira Cloud. Please review the [Atlassian documentation](#) with the migration procedure described in the schemes for details.

Additionally, our app must run migration at a moderate speed to avoid [rate limits](#). Another possible reason for the migration time increase is the situation of several simultaneous migrations performed at the same time, which results in the app migration queue.

After migration, labels are missing in certain Jira issues

This behavior can be caused by the lack of permissions for our app in a particular Jira issue. You'll see the message "Issue does not exist, or you do not have permission to see it."

If you have [issue security levels](#) configured, our app will lack permission to add labels in this project. You can resolve this issue by adding the project role *atlassian-addons-project-access* to the security level:

1. In the upper-right corner of the screen, select **Administration** [blocked URL](#) > **Issues**.
2. In the sidebar, select **Issue security schemes** to open the Issue security schemes page, which lists all the issue security schemes currently available in your Jira installation.
3. Select the scheme name, or the **Security levels** link in the Actions column, to open the Edit issue security levels page.
4. Locate the appropriate security level and click its **Add** link (in the **Actions** column), which opens the **Add user/Group/Project role to issue security level** page.
5. Select the *atlassian-addons-project-access* project role, then click the **Add** button.
