Cloud and Server versions comparison

Learn more on how to migrate from the Server (Data Center) to Cloud version

Because of the Confluence Cloud app's architecture and technical limitations, there are multiple minor differences in functionality between Data Center (Server) and Cloud versions of the app:

Macros / Feature	Data Center (Server) version	Cloud version
The Table Filter macro	✅	✅ (except the Show filter option in the page edit mode)
The Pivot Table macro	✅	✅
The Chart from Table macro	✅	✅
The Table Spreadsheet macro	✅	✅
The Table Spreadsheet Include macro	✅	✅
The Spreadsheet from Table macro	✅ (*off* by default - turning-on instructions)	✅ (*off* by default - turning-on instructions)
The Table Transformer macro	✅	✅
The Table Excerpt macro	✅	✅
The Table Excerpt Include macro	✅	✅ (except the Output cached results option)
The Table from CSV macro	✅	✅
The Table from JSON macro	✅	✅
The Table Toolbox macro	❌ (it will be shown as an unknown macro after the migration from Cloud, but its source data will be restored on the page; you can replicate your macros configuration by combining them)	✅
The AI Table macro [BETA]	✅	✅
Combining the macros included in the app	✅	✅ (please, **switch to the Cloud version** of the page to find additional information here: **the Table Toolbox macro**)
Combining the macros included in the app with the built-in Confluence macros outputting tables	✅	✅
In-app features that require integration with the Confluence default functionality: • Adding the macros through the action icon on the editor pane • Copy table button on the editor's panel • Removing all the macros from Confluence pages (Add-on Macro Cleanup)	✅	❌ (due to the Confluence Cloud app's architecture and technical limitations)

Interactions with third-party macros and apps: • Combining the macros included in the app with the third-party macros outputting tables	✅	❌ (due to the Confluence Cloud app's architecture and technical limitations)
