Cloud and Server/Data Center Versions Comparison

> ℹ **Migration from Server/Data Center to Cloud**
>
> TeamCity Integration for Jira doesn't require any specific data migration. After your data is migrated to Cloud with Jira Cloud Migration Assistant, you can install the TeamCity Integration for Jira Cloud app, connect your TeamCity server, wait for migrated data to index, and then use the app in your new environment.

Because of the Jira Cloud app's architecture and technical limitations, there are multiple differences in functionality between Server/Data Center and Cloud versions of the app:

Feature	Server/Data Center	Cloud
Viewing Builds within Projects	✅	✅
Viewing Builds within Issues	✅	✅
Viewing Builds and Deployments in Development Section	❌	✅
Adding the TeamCity Gadgets	✅	❌
Running Builds from Jira	✅	❌
Tracking the Build Number for Fixed Issues	✅	❌
Integrating with Release Hub	✅	✅
Searching for issues with JQL	✅	❌
