Table Filter 2.4.0

New in this release

Added a capability to filter table rows by number ranges.

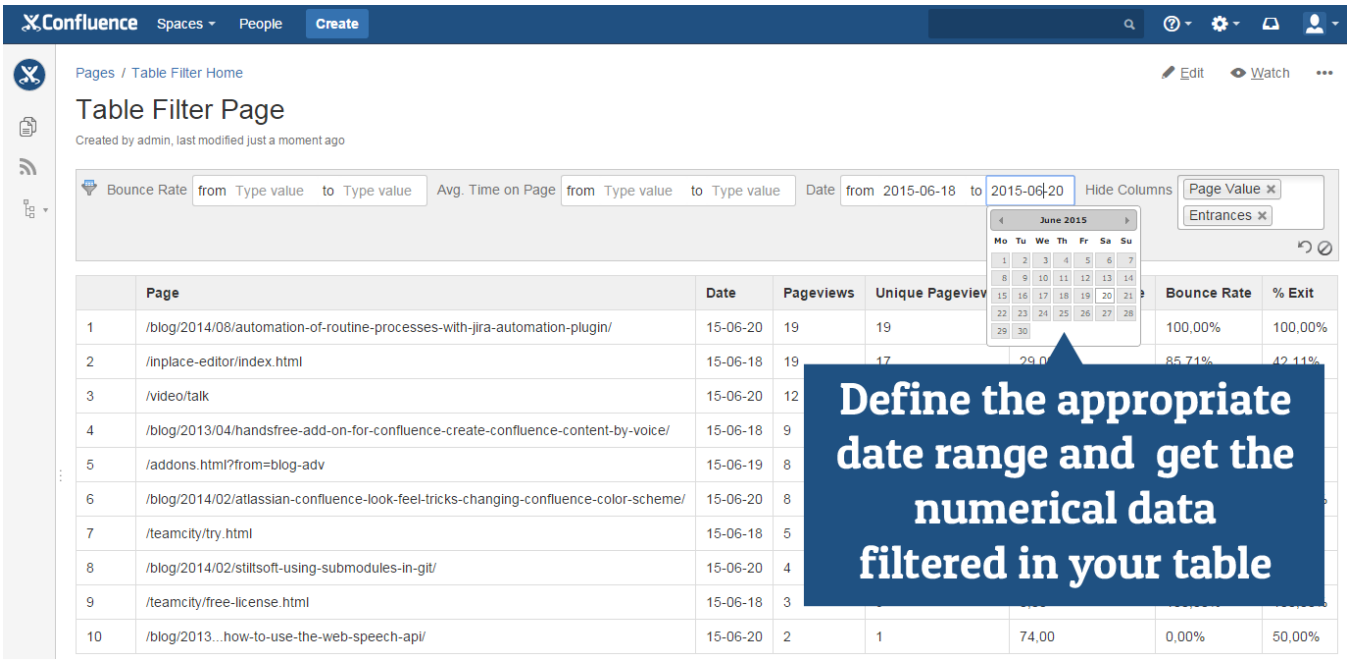

Now if you have a table with some numerical data, you can filter this data and get only values that match the selected range.

	Page				Entrances	Bounce Rate

The new version of add-on also includes the following features:

- Added a capability to modify order of filters by dragging the column label to the appropriate position in the filter boxes.
- Added support for static row numbering in your tables.

- Added the hiding of the already selected values in filter boxes.
- Added compatibility with Confluence 5.8.

Fixed in this release

- Resolved the issue with impossibility to filter data in the column having the double quotes.
- Resolved the issue with impossibility to create filters for columns having the '<' and '>' (less than / greater than) symbols.
- Resolved the issue with impossibility to filter the column data if some value unavailable in the column is set as default value.
