

# TeamCity Integration for JIRA 2.0.2

## New in this release

- Optimized the initial data indexation and added validation of the initially indexed builds. If no build data has been indexed due to some issues with permissions or connectivity, the add-on launches a repeated initial data indexation.

## Fixed in this release

- Resolved the issue with showing no application link names on the dedicated tabs if more than one application link is registered.
- Added exclusion of the root project when showing the list of projects from the multi-level project.
- Resolved the issue with non-update of the URL in the address line after removing some filtering options.
- Resolved the issue with showing no related projects in the Project filter.
