Talk for Confluence 2.6.2

New in this release

- Added Talk notifications for watchers of spaces. Before, users were not receiving notifications about Talk events on pages they were not watchers of (unless users were mentioned in talks), even if those pages were in the space they were watching. Now users are notified about Talk events on all pages of the space they are watching.

Fixed in this release

- Improved the compatibility with Outlook 2010 and 2013. Fixed the issue that occurred when viewing Talk email notifications in Outlook. The issue caused avatars being displayed of abnormally large size.
- Improved the compatibility with Confluence page layouts.
