

Table Filter 3.1.0

New in this release

Added a capability to manage filters for the table when viewing a Confluence page.

Now you can quickly and easily manage filters while working with the table on the page in the view mode. You can always save the added columns, delete the no longer needed filters, set the default values for filters, regulate width of filter boxes and preserve all modifications by saving them in the macro body. You can also just insert your table within the Table Filter macro and add the required filters while viewing the page.

The screenshot shows a Confluence page with a table. A blue callout box with white text says: "Add filters of all types for the appropriate columns in the page view mode". Below the callout, there are two filter input boxes: "City" with a dropdown arrow and "Global Filter" with a text input field. Below these is a table with 4 columns: "First Name", "Last Name", "Position", and "City". The table contains 6 rows of data. A modal dialog is open on the right side of the table, titled "Filter Type". It has two dropdown menus: "Filter Type" (set to "Free Text Filter") and "Filter Column" (set to "City"). At the bottom of the modal are two buttons: "Add filter" and "Cancel".

First Name	Last Name	Position	City
Peter	Black	Project Manager	New York C
Mike	Grey	Front-End Developer	New York C
Alice	Stone	Front-End Developer	New York C
John	Brown	Business Analyst	San Diego
Ashley	Brown	Java Developer	San Diego

Added a capability to define the sorting order for multiple columns of the table.

Now you can always define the appropriate sorting order for your columns and automatically apply it to the table for better data accessibility.

Edit 'Table Filter' Macro

Apply default sorting order for multiple columns of your table

Global Filter

Automatic Row Numbering
Dynamic Ascending
Select this option to enable automatic row numbering for the table(s).

Default Sorting
City (Asc) x
Last Name (Desc) x

☐ Fit Table to Screen Area
☐ Hide Filter Labels
☐ Hide Filters by Default

	First Name	Last Name	Position	City
1	Alice	Stone	Front-End Developer	New York City
2	Mike	Grey	Front-End Developer	New York City
3	Peter	Black	Project Manager	New York City
4	Ashley	Johnson	Java Developer	San Diego
5	John	Brown	Business Analyst	San Diego

Select macro

The new version of add-on also includes the following features:

- Added a capability to filter cells containing both date and time values.
- Added a capability to use both descending and ascending order for automatic row numbering.
- Added a capability to export the table with the defined default sorting order per column to Word and PDF.

Fixed in this Release

- Resolved the issue with the incorrect filtration of data tables generated by SQL Pro add-on by Bob Swift.
- Resolved the issue with impossibility to view page history for pages with tables after update from Table Filter 2.4.0 to 3.x.
- Resolved the issue with the non-working generation of Donut 3D and Time Line Area charts.
- Resolved the issue with showing no content on the page with the pie chart with no dimensions set.
