

# Talk for Confluence 2.6.4

## Fixed in this release

- Fixed the compatibility with several themes, including Zen Foundation and Theme Press. The issue caused a broken page layout when clicking the Insert button on the toolbar in the editor.
- Fixed the issue that occurred when the content of talk comment included the symbol of vertical tabulation. The issue caused talk comments not being displayed on the page. Now when saving a talk comment which contains the vertical tabulation symbol, it's being replaced with a space.
