

Table Filter 8/19/2015

New in this release

Added a capability to manage filters for the table when viewing a Confluence page.

Now you can quickly and easily manage filters while working with the table on the page in the view mode. You can always save the added columns, delete the no longer needed filters, set the default values for filters, regulate width of filter boxes and preserve all modifications by saving them in the macro body. You can also just insert your table within the Table Filter macro and add the required filters while viewing the page.

The screenshot shows a Confluence page with a table. A blue callout box with white text says: "Add filters of all types for the appropriate columns in the page view mode". Below the callout, there is a filter bar with a funnel icon, a search input "City Click or start typing...", and a "Global Filter Start typing..." button. A table with 4 columns (First Name, Last Name, Position, City) and 6 rows is displayed. A modal dialog is open over the table, titled "Filter Type". It has two dropdown menus: "Filter Type" (set to "Free Text Filter") and "Filter Column" (set to "City"). At the bottom of the dialog are "Add filter" and "Cancel" buttons.

Add filters of all types for the appropriate columns in the page view mode

City Click or start typing... Global Filter Start typing...

| First Name | Last Name | Position | City |
|------------|-----------|---------------------|------------|
| Peter | Black | Project Manager | New York C |
| Mike | Grey | Front-End Developer | New York C |
| Alice | Stone | Front-End Developer | New York C |
| John | Brown | Business Analyst | San Diego |
| Ashley | Brown | Java Developer | San Diego |
