

Table Filter 9/11/2015

New in this release

Added a capability to generate a pivot table with summarized data on the basis of a source data table.

Now you can quickly and easily get the pivot table with aggregated values throughout the source data table. Additionally, you can always select which type of operation perform on summarized data values.

Added a capability to generate charts with their automatic update upon filtration.

Now you can generate visual appealing charts with the automatic update of charts each time you filter data in your source table.

Fixed in this release

- Resolved the issue with incorrect data filtration when filtering the same table column through the dropdown filter and then through the free text filter.
