

## Table Filter 3.1.2

### Fixed in this release

- Improved filtration of dates written in different languages.
- Resolved the issue with impossibility to save dates and number ranges containing commas as default values in the Table Filter macro.
- Resolved the issue with impossibility to save parameter modifications in the Table Chart macro if the table contains any characters different from Latin alphabet.
- Resolved the issue not allowing users to increase width of free text filters to more than 250 px or to change width of free text filters added in the page view mode.
- Resolved the issue with incorrect filtration of the pivot table. Both pivot and source tables were filtered at once.
- Resolved the issue with the accidental dragging of drop-down filters when scrolling the list of values by dragging the scroll bar in Firefox and Internet Explorer.
