

# Activity

This feature is available only in Awesome Graphs for **Bitbucket Server**.

**Activity** graphs allow you to track the recent activity in your projects and repositories.

In the Activity tab, in the upper part, you can see **Commits Chart** and **Pull Requests Chart** showing the number of commits/pull requests made by top contributors during the selected time span.

There are project and repository Activity graphs.

## View the project graph

To view the **project** Activity graph:

- navigate to the project of your choice
- click Graphs on the left-hand sidebar
- you'll see the Activity page in the Graphs tab

## View the repository graph

To view the **repository** Activity graph:

- navigate to the repository of your choice
- click Graphs on the left-hand sidebar
- you'll see the Activity page in the Graphs tab

Also while browsing the Activity graph of a certain project, you can select one of its repositories from the Repository Selection drop-down menu with the list of all the repositories of the current project. [Learn more](#)

## Contributors

By default, the Activity graph displays commits and pull requests of all contributors of a project or repository. In the **All contributors** dropdown menu it's possible to choose certain contributors (a team or a user) and browse this graph for them only.

Choose a team in the **Teams** tab to see personal statistics. Read more about teams [here](#).

## Commits Chart

Commits Chart displays the contributors with the biggest number of commits over the selected time span. Each bar represents the number of commits made by one contributor.

Above the chart you can see:

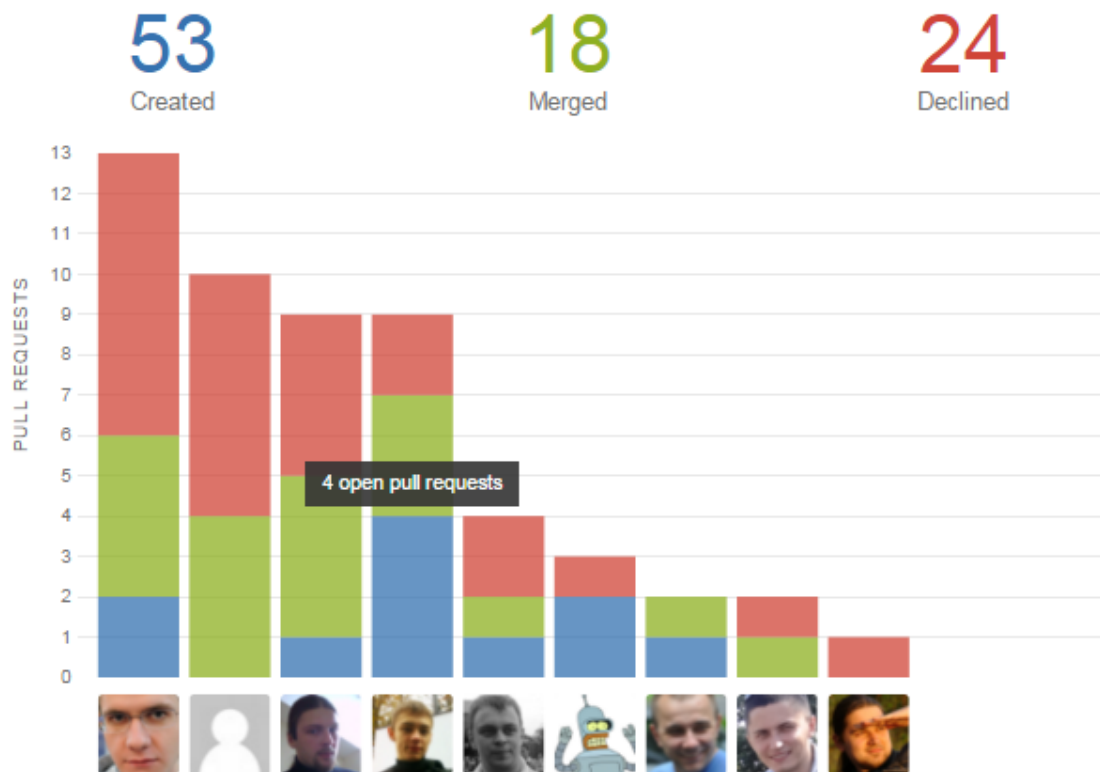

- number of days included into the selected time span
- total number of commits made during the selected time span
- total number of contributors who contributed to the project/repository during the selected time span

Hover over a column to see the exact number of commits.

## Pull Requests Chart

Pull Requests Chart displays the contributors with the biggest number of pull requests over the selected time span. It has stacked bars. Each stacked column shows the number of created, merged, and declined pull requests of one contributor. Above the chart you can see the total number of pull requests created, merged and declined during the selected time span.

Hover over a column to see the exact number of pull requests.

It's possible to hide Pull Requests Chart:

- to hide the chart of the Activity page in a project, a user needs global administrator or project admin permissions.
- to hide the chart of the Activity page in a repository, a user needs global administrator, project admin or repository admin permissions.

To do that, it's necessary to:

- navigate to the Activity tab of the Awesome Graphs section in the project/repository settings
- clear the 'Display pull requests chart' checkbox
- click 'Save'

By default, pull requests chart is displayed both in project and repository Activity tabs. When you configure the Activity tab in project settings, changes apply not only to the project Activity tab, but also to Activity tabs of the repositories of the current project, in which this setting has never been manually changed from the default one in repository settings.

Below the commits and pull requests charts, there are contributors icons. Hover over icons to see contributors names and emails. Icons of Bitbucket Server users are clickable. Clicking them takes you to the [Contributions](#) tab of Bitbucket Server user profile.

## Activity

In the Activity section below the charts, all commits and pull requests of the selected time span are shown as the activity stream with links to the associated JIRA issues, hashes and Change Type lozenges.
