

# Commit Graph

 This feature is available only in Awesome Graphs for **Bitbucket Server**.

To view **Commit Graph** of the current repository, navigate to the **Commits** section on the sidebar. Commit Graph appears to the left of the 'Author' column.

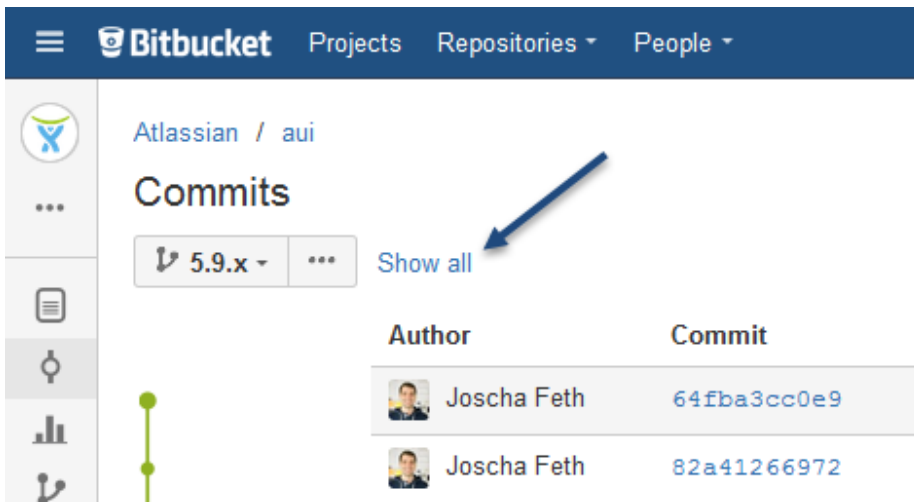

Use it to:

- visualize development flows (branches, merges, commits) of your Git repositories;
- see the merge history and the relationships between commits;
- make sense of your branches history.

## Viewing Commit Graph of all branches

When you select a branch or a tag in the the drop-down list on the Commits page, the page is updated and you can see Commit Graph and commits of that branch or tag. You can also view commits of all branches with Commit Graph.

To do that, click the 'Show all' link.

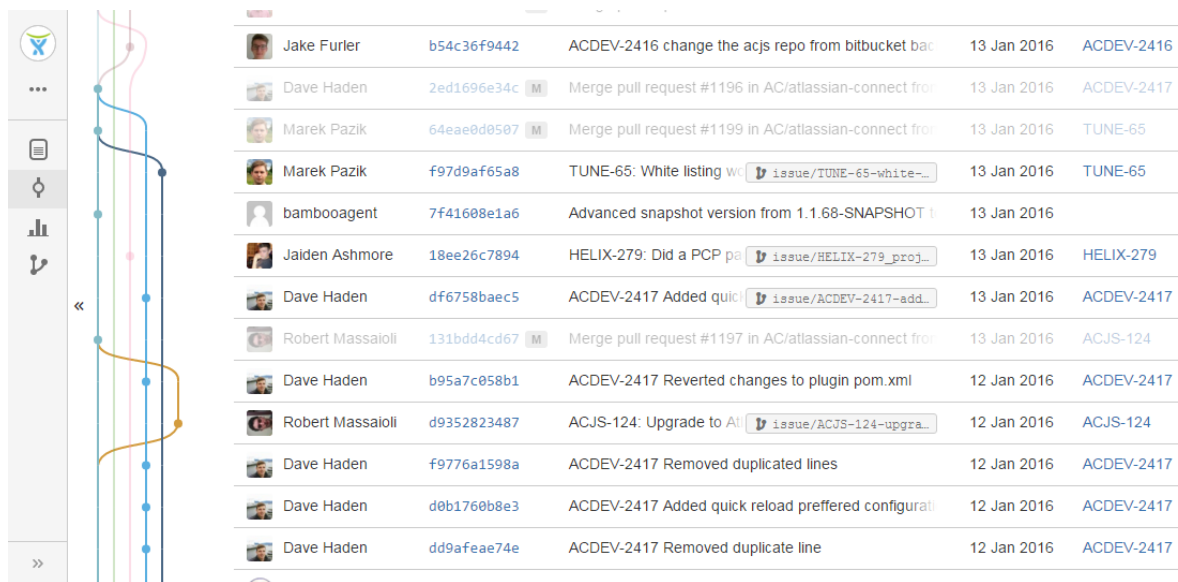

## Labels with branches

Awesome Graphs adds the branches labels that can be seen in commits messages. As you click a tag or branch label, the Commits page is updated and commits and Commit Graph of that tag or branch are displayed.

AUI-3959 avatar: Clean up ids		16 Dec 2015	<a href="#">AUI-3959</a>

## Highlighting Ancestors of a Changeset

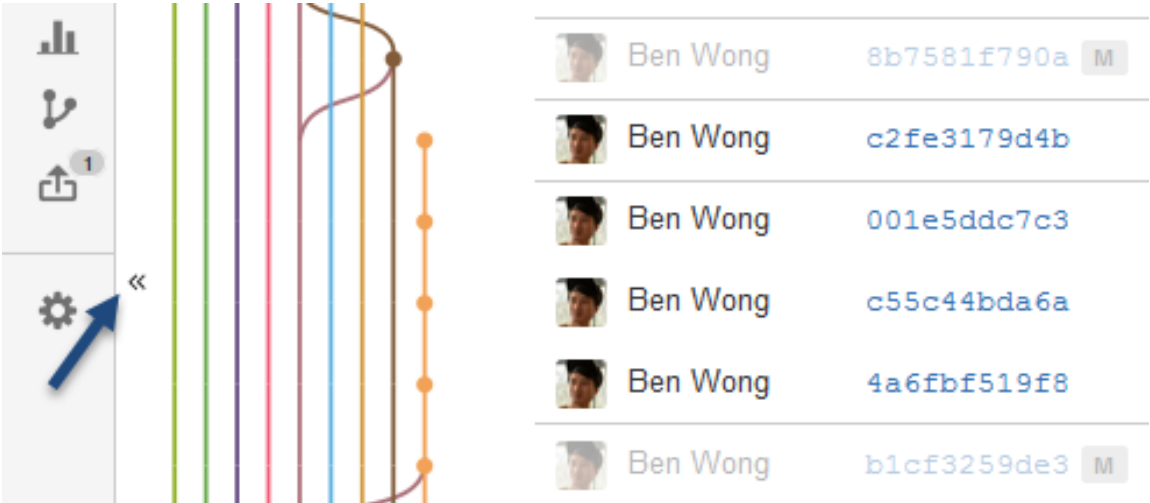

By default, all changesets are highlighted. You can click a point to highlight the ancestors of a certain changeset and see where it comes from.

To have all changesets highlighted again, click the graph anywhere outside the points.

## Collapsing and Expanding Commit Graph

It's possible to collapse and expand Commit Graph: just click the « button to the left of Commit Graph to hide it or » to expand and view it again.

If you have any feedback or requests concerning this feature, please, [let us know](#).
