

Smart Attachments 1.9.0

New in this release

Added support for workflow validators checking specific categories for presence of attached files or verifies that attachments were uploaded by a specific user, by users from a specific group or by users having a specific project role.

Now you can easily customize workflow transitions and add validators checking for attachments meeting the appropriate criteria.

The screenshot displays the JIRA Administration interface. The 'Administration' section is active, showing a search bar and navigation links for Projects, Issues, User management, System, and Add-ons. A table titled 'Add Validator To Transition' lists various validators. A dotted blue line connects the 'Category is not Empty' validator to a modal window titled 'Add Parameters To Validator'. This modal shows the 'Category' set to 'Documentation'. Another dotted blue line connects the 'File Uploader is in Project Role' validator to a second modal window, which shows the 'Project Role' set to 'Senior Texwriter'. A third dotted blue line connects the 'File Uploader is in Group' validator to a third modal window, which shows the 'Group' set to 'texwriters'. Each modal includes 'Add' and 'Cancel' buttons.

Name	Description
<input checked="" type="radio"/> Category is not Empty	Validates that the
<input type="radio"/> File Uploader is in Project Role	Validates that the
<input type="radio"/> File Uploader is in Group	Checks that the
<input type="radio"/> Permission Validator	Validates that the user has a permission.
<input type="radio"/> User Permission Validator	Validates that the user has a permission. Obsolete.

Modal 1: Add Parameters To Validator
Add required parameters to the Validator.
Category:
Add Cancel

Modal 2: Add Parameters To Validator
Add required parameters to the Validator.
Project Role:
The project role to check.
Add Cancel

Modal 3: Add Parameters To Validator
Add required parameters to the Validator.
Group:
The group membership to check.
Add Cancel

Now JIRA users will not be able to execute transitions if validation of attachments fails.

The screenshot shows a JIRA issue page for 'DOCMT-26' with the title 'Prepare the set of documentation with project overview'. A modal dialog titled 'Workflow Error' is displayed in the center. The dialog contains a red error icon and the following text:

The 'Documents' category is empty. Your workflow requires presence of at least one file in each of the mentioned categories for performing the current transition.

It seems that you have tried to perform an illegal workflow operation.

If you think this message is wrong, please contact your JIRA administrators.

The dialog has a 'Close' button in the bottom right corner. In the background, the JIRA interface is visible, including a sidebar with 'Details', 'Description', and 'Attachments' sections, and a main content area with a table of attachments.

Attachment	Actions
Desktop Design	+
Mobile Design	+
Documents	+
Miscellaneous	+
Test Cases	+

On the right side of the main content area, there is a 'Dates' section with 'Created: Just now' and a 'Stop watching this issue' button.

Fixed in this release

- Resolved the compatibility issue with Xray - Test Management inside JIRA add-on. The issue caused an error when adding a new defect for the test run.
- Resolved the issue with showing the field for selecting attachment category when using JIRA Email This Issue add-on in the form for sending issues.
- Resolved the issue with output of errors in the JIRA log file when adding, editing or deleting issues.
- Resolved the issue with saving a document revision to the Uncategorized category when pressing Ctrl + Enter keys.
