No Email Storm 2.1.0

The current release of No Email Storm was created as a custom enhancement requested by Mercy Ships organization. These people are doing great things for African children. They help children in the poorest regions of Africa and supply kids with first-rate medical care that saves their lives. Their hospital ship provides free lifesaving surgeries for people where medical care does not exist. You can make a donation or support these courageous people in their everyday work.

StiltSoft company was happy to help this organization for free and hope that their efforts will save a lot of lives in future.

New in this release

Added a capability to select which button to use as prominent in Confluence editor - either Save or Save & Notify.

Now you can easily set the appropriate button to be default and shown as prominent in Confluence editor.
