Overview

Smart Attachments for Confluence

Smart Attachments is a powerful document management solution for Confluence. It allows you to preserve all the project documents, media assets, and other files in the space storage related to the specific project. Now you can forget about the shared file storages on Dropbox, Box.com or OneDrive, or stop using Sharepoint. Use the centralized space storage for collecting all the project documents and keep them organized in folders of the structure you really need.

Take advantage of the following benefits:

- manage folder structure of the space storage
- manage documents and assets in the storage
- upload folders and documents with the automatic folder structure recreation
- preserve all the revisions under the parent document
- embed documents and assets into Confluence pages
- embed folders into pages with the navigation across space storage
- manage labels for better document searchability
