

TeamCity Integration for JIRA 2.1.0

New in this release

Added compatibility with JIRA 7

Now you can continue viewing TeamCity build data in the new JIRA 7. For the details on the required procedures to perform while migrating from JIRA 6 to JIRA 7, see below.

Migrating to Atlassian JIRA 7

To avoid possible issues while migrating from JIRA 6 to JIRA 7, please follow the instructions below:

1. Navigate to JIRA administration.
2. Open the **Manage Add-ons** section and disable TeamCity Integration for JIRA add-on.
3. Update to JIRA 7.
4. Install [TeamCity Integration for JIRA 2.1.0+](#) add-on.
5. Open the **Manage Add-ons** section and enable the add-on.

If it was not done prior to migration to JIRA 7 and you are continuously receiving the errors, please do the following:

1. Stop JIRA Server.
2. On the server, open the path **Drive:\{software installation folder}\Atlassian\Application Data\JIRA7\plugins\installed-plugins**.
3. Delete TeamCity Integration for JIRA add-on (JAR file) from this folder.
4. Start JIRA Server.
5. Install [TeamCity Integration for JIRA 2.1.0+](#) add-on.
