Managing Default Filter Values
Table Filter and Charts for Confluence add-on allows you to specify default filtration values for all filter types. You can use default values to show the required data set to your colleagues and partners. You can set filters while editing the Confluence page or viewing it.

Setting default values

1. Switch the page to edit mode.
2. Select the macro and click **Edit**.
3. Switch to the **Filtration** tab.
4. Click Set **filters' default values**.
5. Select or enter the appropriate default values for available filters. You can set multiple values for dropdown, free text and global filters.
6. Click **Save**.
7. Save the macro.

You can also set default values while filtering the table in the page view mode.
