

# Table Filter 3.3.0

## New in this release

**Added a capability to filter the table data in the page edit mode.**

Now you can easily work with your table data while editing or viewing Confluence pages.

The screenshot shows the Confluence Table Filter 3.3.0 interface. At the top, there's a Confluence header with navigation links like Spaces, People, Questions, Calendars, Contact List, and a Create button. Below the header is a toolbar with various editing tools. The main content area displays a table titled 'Financial Data' with 9 columns: Transaction ID, Transaction Amount, Fee Amount, Transaction Type, Service Agent, Transaction Date, Customer Type, Transaction Status, and Customer ID. The table contains 4 rows of data. Below the table is a filter panel with buttons for 'Edit' and 'Remove'. The filter panel includes dropdowns for 'Customer Type' (set to 'Business'), 'Service Agent' (set to 'Ashley Stone'), and a date range for 'Transaction Date' (from 9/10/2015 to 9/20/2015). A blue callout box with white text says 'Filter table data while editing the page and update filtered values on the fly'. At the bottom of the filter panel, there's a 'What did you change?' input field, a 'Notify watchers' checkbox, and buttons for 'Preview', 'Save', and 'Close'.

Transaction ID	Transaction Amount	Fee Amount	Transaction Type	Service Agent	Transaction Date	Customer Type	Transaction Status	Customer ID
512297002	840.38	1.68	Check Cashing	Gustavo Sanchez	9/15/2015	Business	Pending	1654CHGHD2941
579476961	950.38	13.31	Mortgage Loans	Ashley Stone	9/17/2015	Business	Archived	2182HEHDG3579
578207183	595.63	9.53	Mortgage Loans	Ashley Stone	9/17/2015	Business	Rejected	2473DJDCI1156

The new version of add-on also includes the following features:

- Added an option to hide the filtration pane for other users being not able to change the filtration values.
- Added an option to hide the pane for managing parameters of the pivot table.
- Added output of corresponding values when hovering over the charts.
- Changed the behavior of filter management in the page view mode. Now the user selects the column first and then selects the appropriate filter type for this column.

## Fixed in this release

- Resolved the issue with showing the abnormal horizontal scroll bar when clicking the Show filters button for a table wider than the page itself.
- Resolved the issue with performance slowdown when filtering large table with merged cells.
- Disabled the automatic expansion of the list with columns for the dropdown filter when editing the macro body.
